

HOME SERVICES WEBSITE — FULL PROJECT PLAN

Build a lead-generating service business website that converts visitors into booked customers.

This document covers site architecture, all 10 feature specifications, technology recommendations, SEO strategy, a phased development roadmap, and design guidelines — everything needed to plan, scope, and build the project.

BUILD PHASES

§ 01

Project Overview

Goals, audience, and what success looks like

BUSINESS GOAL

Generate qualified service leads and direct bookings online — reducing reliance on phone-only inquiries and third-party referral platforms that take commission.

TARGET AUDIENCE

- Homeowners aged 28–65 with an urgent or planned service need
- Property managers coordinating maintenance across units
- Small landlords looking for reliable, recurring service partners
- Residents searching locally on mobile devices

SERVICES OFFERED

- Junk Removal
- House Remodeling
- Plumbing
- HVAC (Heating, Ventilation, A/C)
- Electrical
- Roofing & Gutters

PRIMARY CONVERSION ACTIONS

- Book a service online
- Request a free quote
- Call the business directly
- Submit an emergency service request

⚠ **Key insight:** Most home service websites lose customers to friction — too many clicks before a phone number appears, no pricing transparency, unclear service areas. Every design decision should reduce friction between "I need help" and "help is booked."

§ 02

Site Architecture

Complete sitemap organized by section and purpose

\$ 04

Feature Specifications

Detailed spec for all 10 requested features — priority, complexity, and implementation notes

F01
FEATURE

Google Reviews & Ratings Display

Pull real Google Business Profile reviews via the Google Places API and display them site-wide — star ratings, review count, and individual testimonials with reviewer names and photos. Shown on the homepage, service pages, and a dedicated /reviews page. Builds immediate trust with first-time visitors.

PRIORITY: HIGH

TRUST SIGNAL

CONVERSION

- INTEGRATION

Google Places API
- COMPLEXITY

Medium — API key + caching
- DATA REFRESH

Every 24 hrs (cached)
- FALLBACK

Static curated testimonials

Individual Service Pages with SEO

A dedicated page per service (Junk Removal, Plumbing, HVAC, Remodeling, Electrical, Roofing) — each with a detailed service description, itemized pricing or price ranges, an accordion FAQ section, a before/after photo gallery filtered to that service, relevant Google reviews, and a service-specific booking CTA. These pages are the primary organic traffic targets.

PRIORITY: HIGH

SEO

TRUST SIGNAL

F02

FEATURE

PAGES

6 service pages (expandable)

CMS

Headless CMS for content mgmt

SCHEMA MARKUP

Service + FAQ + Review schema

COMPLEXITY

Medium — templated layout

Online Booking System

A 3-step booking flow: (1) select service type, (2) choose preferred date and time slot from available calendar, (3) enter service address and contact info. On submission, customer gets an email confirmation and the business gets a booking notification. Reduces phone-tag and captures leads at the moment of intent.

PRIORITY: HIGH

CONVERSION

F03

FEATURE

TOOL OPTIONS

Acuity, Calendly, or custom

NOTIFICATIONS

Email + SMS confirmation

CALENDAR SYNC

Google Calendar integration

COMPLEXITY

High — scheduling logic

Emergency Service Feature

F04

FEATURE

A dedicated /emergency page with a high-urgency design (red CTA, prominent phone number, short 2-field form). Accessible from a persistent "Emergency?" header link and a sitewide banner when needed. Sub-pages for Emergency Plumbing, Emergency HVAC, and Emergency Electrical each target high-intent local search queries. Response time SLA should be displayed clearly.

PRIORITY: CRITICAL**CONVERSION****SEO****FORM FIELDS**

Name + Phone + Issue (2–3 fields)

ALERT PATH

SMS to on-call technician

AVAILABILITY

24/7 label with hours display

COMPLEXITY

Low-Medium — page + form

Transparent Pricing Display

Show starting prices, price ranges, or pricing tiers on each service page and the services hub. Even a "Starting at \$" label reduces visitor hesitation and sets expectations. Include a pricing FAQ that explains what affects final cost (square footage, materials, job complexity). For remodeling, offer a cost-calculator widget.

PRIORITY: HIGH**TRUST SIGNAL****CONVERSION****F05**

FEATURE

FORMAT

Range tables + "Starting at" labels

CALCULATOR

Optional remodeling estimator

UPDATES

CMS-managed, no code needed

COMPLEXITY

Low — content + layout

Project Gallery & Portfolio

A filterable grid of completed project photos, organized by service type. Each project can include before/after slider, brief description, service performed, and location (city/neighborhood level).

F06

FEATURE

Featured projects showcase breadth of workmanship. Doubles as SEO content with keyword-rich alt text and file names.

PRIORITY: HIGH**TRUST SIGNAL****SEO****LAYOUT**

Masonry grid with filter tabs

BEFORE/AFTER

Drag-slider comparison widget

CMS

Photo upload via admin panel

COMPLEXITY

Medium — image handling

F07

FEATURE

Fixed Mobile "Call Now" Button

A sticky floating button visible only on mobile (<768px) that is always in the lower-right corner of the screen — tapping it immediately initiates a phone call. Disappears when a contact or booking form is in view to avoid redundancy. Simple, proven lead-capture mechanism for mobile visitors who prefer calling.

PRIORITY: HIGH**CONVERSION****VISIBILITY**

Mobile only (<768px)

ACTION

tel: link (instant call)

POSITION

Fixed, bottom-right, z-index top

COMPLEXITY

Low — CSS + HTML

Live Chat Widget

Embed a chat widget (Tidio or Tawk.to — both have free tiers) that allows visitors to ask quick questions, get estimates, or start a booking. Outside business hours, falls back to a "Leave a message" form that delivers to email. The widget should load asynchronously so it does not affect page performance or Core Web Vitals scores.

F08

FEATURE

PRIORITY: MEDIUM

CONVERSION

TOOL OPTIONS

Tidio (free), Tawk.to (free)

OFFLINE MODE

Email fallback form

LOAD STRATEGY

Async, after page load

COMPLEXITY

Low — embed snippet

F09

FEATURE

PRIORITY: HIGH

CONVERSION

BACKEND

Formspree, EmailJS, or Netlify Forms

ANTI-SPAM

hCaptcha (privacy-friendly)

AUTO-REPLY

Confirmation email sent to visitor

COMPLEXITY

Low — third-party service

"Get a Free Quote" Forms

Short, 4–5 field lead capture forms placed throughout the site: homepage (above the fold), bottom of each service page, contact page, and as a persistent sticky element on desktop. Fields: Name, Phone, Email, Service type, Brief description. Submission triggers an auto-reply email and a notification to the business. Optional: allow photo upload so the team can estimate accurately.

Local Service Area Pages

Individual landing pages targeting each city or neighborhood served — e.g. `/areas/austin-tx` or `/areas/downtown-dallas`. Each page is unique: localized headline, mention of nearby landmarks or zip codes, services available in that area, local customer reviews, and a city-specific booking CTA. These pages are the highest-ROI SEO investment for a local service business.

PRIORITY: CRITICAL

LOCAL SEO

F10

FEATURE

PAGE COUNT

10–20 area pages at launch

TEMPLATE

CMS-driven, one template

SCHEMA

LocalBusiness + areaServed JSON-LD

COMPLEXITY

Medium — CMS template setup

\$ 05

Recommended Tech Stack

Tools chosen for performance, low maintenance cost, and ease of content updates

◆ **Stack philosophy:** Static site generation (SSG) for speed and SEO, a headless CMS so the business owner can update content without a developer, and third-party integrations for bookings and chat rather than building from scratch.

FRONTEND FRAMEWORK

Next.js (Recommended)

SSG + ISR, great for SEO, large ecosystem, easy Vercel deployment

Astro (Alternative)

Lighter, faster builds, excellent for mostly-static sites, zero JS by default

CONTENT MANAGEMENT (CMS)

Sanity (Recommended)

Free tier, flexible schemas, real-time editing, built-in image CDN

Contentful (Alternative)

More structured, good for teams, generous free tier for small sites

BOOKING & SCHEDULING

Acuity Scheduling

Embeddable widget, service-specific calendar rules, SMS reminders

Calendly (Simpler)

Faster to set up, limited customization, good for simple needs

FORMS & LEAD CAPTURE

Formspree

No backend needed, spam filtering, free tier for 50 submissions/mo

Netlify Forms (if on Netlify)

Zero-config with Netlify hosting, 100 submissions/mo free

REVIEWS INTEGRATION

LIVE CHAT

G

Google Places API

Pull live Google Business reviews, ratings, and review count

E

EmbedSocial / Elfsight

No-code widget alternative to Places API — simpler but costs \$9–29/mo

T

Tidio

Free tier, AI chatbot option, mobile app for responding on the go

T

Tawk.to (Completely Free)

Free forever, solid features, no branding, good for budget-conscious

HOSTING & DEPLOYMENT

V

Vercel (Recommended)

Native Next.js hosting, edge CDN, free tier for small sites, auto-deploys

N

Netlify (Alternative)

Great for Astro, generous free tier, form handling built-in

ANALYTICS & SEO

G

Google Analytics 4 + Search Console

Traffic tracking, keyword performance, indexing status — free

P

PostHog (Privacy-friendly alt.)

Open source, no cookie banner needed, session recordings

§ 06

SEO Strategy

Local search dominance is the single highest-ROI investment for a home services business

● TARGET KEYWORD CATEGORIES

- Service + location: "plumber in [city]", "HVAC repair [city]"
- Emergency: "emergency plumber near me", "24/7 HVAC repair"
- Intent-based: "how much does junk removal cost", "best remodeling contractor [city]"
- Neighborhood-level: "[neighborhood] handyman", "junk removal [zip code]"
- Comparative: "licensed plumber vs unlicensed", "HVAC tune-up checklist"

● ON-PAGE SEO PER SERVICE PAGE

- Primary keyword in H1, URL slug, and first 100 words
- FAQ section with schema markup (wins FAQ rich results)
- Service schema (name, provider, areaServed, price)
- Review aggregate schema linked to Google reviews
- Breadcrumb schema for navigation
- Internal links to related services and area pages

● LOCAL SEO PRIORITIES

- Google Business Profile — fully optimized, photos updated monthly
- NAP consistency: Name, Address, Phone identical everywhere
- Local citation building (Yelp, Angi, HomeAdvisor, BBB)
- 10–20 city/neighborhood area pages at launch
- Embed Google Map on contact + area pages
- Encourage reviews after every completed job

● TECHNICAL SEO

- Core Web Vitals: LCP <2.5s, CLS <0.1, FID <100ms
- Mobile-first design and fast load on 3G
- Sitemap.xml auto-generated and submitted
- robots.txt configured correctly
- HTTPS enforced, canonical URLs set
- Image optimization (WebP, lazy loading, descriptive alt text)
- Structured data (JSON-LD) on all key pages

● BLOG CONTENT STRATEGY

- "How much does [service] cost in [city]?" — 1 per service
- "Signs you need [service] repair" — seasonal topics
- "How to choose a [trade] contractor" — trust-building
- "[Season] home maintenance checklist" — recurring content
- 2–4 posts per month, each targeting a long-tail keyword

● ONGOING SEO TASKS

- Monthly: Add new project photos with keyword-rich filenames
- Monthly: Respond to all Google reviews (signals activity)
- Quarterly: Refresh service page content with new info
- Quarterly: Add 3–5 new blog posts
- Biannually: Add new service area pages for expansion
- Monitor Search Console for index coverage issues

§ 07

Development Roadmap

6 phases from project setup to post-launch — approximately 10–14 weeks total

01

FOUNDATION

Weeks 1–2

Project setup, design system, core layout

- Domain + hosting setup
- Next.js / Astro project scaffold
- CMS (Sanity) configured
- Design tokens + component library
- Header + Footer components
- Homepage layout (no live data yet)
- Mobile responsive grid
- Analytics wired up

02

CORE PAGES

Weeks 3–4

Services hub, individual service pages, About, Contact

- Services hub page
- All 6 service detail pages
- FAQ accordion component
- Pricing table component
- About Us page
- Contact page
- Basic SEO meta tags on all pages
- JSON-LD schema markup

03

CONVERSION

Weeks 5–6

Booking system, quote forms, emergency page, mobile CTA

- Acuity / Calendly booking embed
- /book page
- Quote form (Formspree)
- Emergency Services page + sub-pages
- Emergency sub-service pages (3)
- Mobile sticky "Call Now" button
- Form placement across all service pages
- Email auto-reply setup

04

TRUST LAYER

Weeks 7–8

Google reviews, project gallery, live chat

- Google Places API integration
- Reviews component (homepage + service pages)
- /reviews page
- Project gallery (filterable grid)
- Before/after slider component
- /gallery page
- Tidio / Tawk.to chat embed
- Chat offline form

05 LOCAL SEO

Weeks 9–10

Service area pages, blog, sitemap, final SEO pass

- Service areas hub page
- 10–15 city/area detail pages
- Blog index + first 4 posts
- Sitemap.xml generation
- robots.txt
- Canonical URLs audit
- Google Search Console setup
- Google Business Profile sync

06 QA & LAUNCH

Weeks 11–12

Testing, performance, accessibility, go-live

- Cross-browser testing
- Mobile device testing (iOS + Android)
- Core Web Vitals audit (Lighthouse)
- Accessibility audit (WCAG 2.1 AA)
- Form submission end-to-end test
- Booking flow end-to-end test
- DNS cutover + SSL verify
- Post-launch monitoring (24hr)

§ 08

Design Guidelines

Visual direction, brand voice, and UX principles for the site designer or developer

BRAND VOICE

- Direct and confident — "We fix it today," not "We try to address issues promptly"
- Honest about pricing — give ranges, not vague "call for a quote" on everything
- Local and personal — mention the city by name, use "your home" not "the property"

- No jargon — plain English, even for HVAC and electrical services
- Active voice — "We arrive in 2 hours," not "Arrival times are within 2 hours"

VISUAL PRINCIPLES

- High contrast — accessibility and urgency both demand it
- Real photography only — stock photos erode trust for service businesses
- Hierarchy by size — the phone number and primary CTA should always be the biggest element after the headline
- Emergency pages: red accent, large type, minimal friction
- Speed over decoration — no heavy animations on mobile

NAVIGATION REQUIREMENTS

- Phone number visible in the header on every page
- Emergency link in the nav, always visible
- Services dropdown accessible in one click
- Mobile: hamburger menu with CTA buttons (Call, Book) at top
- Breadcrumbs on all inner pages for SEO and orientation

CTA HIERARCHY

- Primary CTA: "Book Online" or "Get a Free Quote" (buttons)
- Secondary CTA: "Call Us Now" (phone link)
- Tertiary CTA: "Learn More" on service previews
- Emergency CTA: Red button, separate from main hierarchy
- Repeat CTAs every ~400px of scroll — at least once per screen

TRUST SIGNALS TO PLACE ABOVE THE FOLD

- Google star rating + review count (e.g. "★ 4.9 from 142 reviews")
- Years in business badge
- Licensed & Insured badge
- Service area summary ("Serving [City] and surrounding areas")

- Response time promise ("Same-day service available")

PERFORMANCE TARGETS

- Lighthouse Performance score: >90 on mobile
- Largest Contentful Paint (LCP): under 2.5 seconds
- First Input Delay: under 100ms
- Cumulative Layout Shift: under 0.1
- Page weight: under 500kb for initial load
- Images: WebP format, max 120kb per image

\$ 09

Success Metrics

How to measure whether the website is doing its job, post-launch

LEAD GENERATION (MONTHLY)

- Quote form submissions: target 30+ / month
- Online bookings: target 15+ / month
- Phone calls from website: target 50+ / month
- Emergency form submissions: tracked separately

TRAFFIC & SEO

- Organic sessions: +20% month-over-month first 6 months
- Keywords ranking page 1: 10+ by month 3
- Local pack appearances for core services in target cities
- Bounce rate under 60% on service pages

USER EXPERIENCE

- Average session duration: over 1:30 minutes
- Pages per session: 2.5+
- Mobile conversion rate: within 80% of desktop rate
- Form completion rate: over 40%

REVIEW VELOCITY

- New Google reviews: 4+ per month
- Average rating maintained at 4.7+
- Response rate to reviews: 100%
- Testimonials added to site: 2+ per month

- ✓ **Review at 90 days:** Check organic rankings in Search Console, conversion rates in GA4, and lead volume against targets. Service area pages and blog posts typically take 60–90 days to rank — expect organic growth to accelerate in months 3–6, not weeks 1–2.
